EDUCATION

Rai University **CGPA - 9.5/10**
2024 - 2028
B.Tech. CSE

CERTIFICATIONS

- Harvard University CS50x Certificatet
- Microsoft Azure AI Essentials Certificate
- Shekunj AI Course Certificate
- Gateway Load Balancer
- Amazon DocumentDB
- GitHub Copilot Fundamentals
- Container Security
- Azure Fundamentals
- Basics of Azure Services
- HackerRank Certificates

SKILLS

- **MERN Stack**
- **Next.Js**
- **UI/UX Design**
- **Redux Toolkit**
- **Tailwind CSS**
- **JavaScript**
- **DataBase Management (MongoDB, Redis, MySQL)**
- **DSA (Intermediate) using C++**
- **Postman**
- **Git and Github**
- **Socket.io**

PROJECTS

Willow And Vine

Live GitHub

- Built a scalable MERN-based e-commerce platform with Firebase authentication, dynamic product catalog, persistent cart storage, and secure checkout workflows backed by MongoDB.
- Designed and implemented RESTful address management services, securely associating user data with Firebase UID and eliminating the need for a separate user model.

TECH-STACK : MERN, FIREBASE AUTH, TAILWIND CSS & REST API

Finoptix

Live GitHub

- Developed a financial management web application enabling expense tracking, goal setting, and basic investment insights to help users monitor and manage personal finances.
- Designed a responsive, scalable dashboard to visualize spending patterns, track financial goals, and support future feature expansion.

TECH-STACK : MERN, JWT AUTH, TAILWIND CSS & REST API

Verbio

Live GitHub

- Built a scalable social web application featuring real-time chat, video calling, and user-to-user interactions in an interactive environment.
- Integrated GetStream APIs to enable high-performance real-time messaging, chat channels, and synchronized conversations with a focus on scalability and user experience.

TECH-STACK : MERN, JWT AUTH, TAILWIND CSS & REST API, GETSTREAM API

GearGuard || Odoo Hackathon Project

Live GitHub

- Developed a full-stack MERN maintenance management system for tracking enterprise assets and managing corrective and preventive maintenance across the complete request lifecycle.
- Implemented secure role-based access control and team assignment logic, using JWT authentication to enforce controlled task ownership and workflow authorization.
- Built interactive workflow and scheduling features, including a drag-and-drop Kanban board, calendar-based preventive maintenance, automated overdue detection, and real-time status updates.

TECH-STACK : MERN (MONGODB, EXPRESS.JS, REACT, NODE.JS), JWT AUTHENTICATION, RESTFUL APIS, TAILWIND CSS, REACT BEAUTIFUL DND, FULLCALENDAR, MONGOOSE
